FEEDER ARM

Feeder Arm QR

Cod. 906VVQR75

75-120 cm

Ø 30-36 mm

Braccio telescopico studiato per garantire un perfetto ed estremamente stabile posizionamento delle canne da feeder sia in situazioni di pesca con acqua ferma, che in caso di pesca in correnti sostenute. Particolarmente interessante l'attacco al paniere, in quanto anche questo feeder arm di ultima generazione dispone dello sgancio rapido QR. Da sottolineare inoltre la possibilità di trasformare il feeder arm in braccio porta canne, con l'aggiunta dei due supporti alle due estremità.

This next-generation telescopic feeder arm is designed to allow exact, stable positioning of rods when feeder fishing both on still and running water. It features a QR quick-release fitting which enables the arm to be easily fitted to the frame of your seatbox. The addition of two rod rest heads at either end will turn the feeder arm into a rod support bar.
